

Natalia R. Arutyunyan was graduated from the Department of Physics of M. V. Lomonosov Moscow State University in 2005. In 2005-2008 she worked as a PhD student at A. M. Prokhorov General Physics Institute of Russian Academy of Sciences, and in 2009 she received a PhD degree in Laser Physics. The PhD thesis “Laser optical spectroscopy of mono- and hetero-phased nanotubes from carbon and boron nitride” was focused on peculiarities of optical properties of nanotubes, based on carbon and boron nitride. From 2008 till now she works as a researcher at A. M. Prokhorov General Physics Institute of the Russian Academy of Sciences. Her main scientific interests include the optical spectroscopy of nanomaterials (carbon nanostructures as nanotubes, nanodiamonds, carbyne) and layered semiconductors. She is a co-author of 31 articles and more than 40 conference proceedings.
