

Rinat R. Ismagilov

e-mail:

ismagil@polly.phys.msu.ru

Rinat R. Ismagilov received degrees in physics (MSc in 2008 and candidate of science in 2011) from Moscow State University and a PhD in 2013 from University of Eastern Finland. Since 2011 he is a Researcher at the Physics Department of Lomonosov Moscow State University ([MSUcarbonlab](#)). His main research activities focus on plasma-enhanced chemical vapor deposition (PECVD) of nanocarbon materials including development of an in situ diagnostic method for PECVD process characterization by optical emission spectroscopy; evaluation and modeling the nanocarbon growth from plasma; and characterization of structural, electronic, and optical properties of nanocarbon materials.
