

**Vladimir L. Kuznetsov** received the Diploma degree in chemistry from Novosibirsk State University, Novosibirsk, Russia, in 1973, and the Ph.D. degree from the Borekov Institute of Catalysis, Novosibirsk, in 1978. He started his career at Borekov Institute of Catalysis in 1973, where he was a Junior Research Scientist, Senior Research Scientist. In 1986–1991, he was a Scientific Secretary of the Borekov Institute of Catalysis, where he was the Head of laboratory, and the Head of Information Center in 1994–2003. In 1978–1979, he was a Postdoctoral Researcher at the University of California, Berkeley. He was also a Visiting Scientist at Case Western Reserve University, Drexel University, and the Swiss Federal Institute of Technology Lausanne. Currently, he is the Head of the Laboratory of nanostructured carbon materials at the Borekov Institute of Catalysis and a lecturer of the course Molecular Design of Catalysts in Novosibirsk State University. His research interests include tailor-made catalysts; synthesis and investigation of surface compounds; ultradisperse materials (cluster derived catalysts, aerogels of SiO<sub>2</sub>, detonation soot, nanodiamond, and onion-like carbon, carbon nanotubes); and growth and characterization of SiC whiskers, carbon nanotubes, composites containing nanocarbons, multi-component heterogeneous biocatalysts. He is the author or coauthor of more than 200 articles in refereed journals, nearly 450 conference papers, ten patents and six book chapters.
